TECHNICAL AREA ÁREA TÉCNICA

Adhesion, understood as the strength of the bond between the ceramic piece and the base, plays a vital role in the quality of the tiled surface. Good adhesion should guarantee that the tile is firmly fixed to the base. The develop ment of new low porosity ceramic materials that are resistant to abrasion and sub-zero temperatures, large formats, and their installation in industrial or large commercial areas, facades, etc., has led to a corresponding development in adhesive products.

Increased knowledge about the use of special adhesives means that thick layer installation (mechanical adhesion) is being replaced by thin layer installation (chemical adhesion); the latter offers clear advantages, particularly in relation to quality of both adhesion and durability. The appropriate adhesive must be chosen, taking into account the surface to be tiled and the type of ceramic tile.

It is very important to use the right tools when laying the tiles (notched trowel, white rubber mallet, spirit level and suction cup). The substrate on which the tiles are to be laid must also be free of any plaster, paint residues etc., thus enabling the adhesive to be effective over time.

The adhesive manufacturer's instructions must be followed at all times.

La adherencia, considerada como la fuerza de unión entre la pieza cerámica y el soporte, juega un papel importantísimo en la calidad de la baldosa cerámica. Una buena adherencia debe asegurar una firme sujeción de las piezas al soporte. La evolución de nuevos materiales cerámicos con baja porosidad, resistencia a la abrasión, al hielo, grandes formatos, así como el montaje o instalación de los mismos en industrias, grandes áreas comerciales, fachadas, etc., hacen que se desarrollen productos adhesivos.

El conocimiento adquirido acerca del uso de adhesivos especiales, hacen que el proceso de colocación en capa gruesa (adherencia mecánica) sea sustituido por un sistema de colocación con capa fina (adherencia química) que ofrece claras ventajas, especialmente relacionadas con la calidad de la obra, tanto en lo que se refiere a la adherencia como a la durabilidad. Por lo que se escogerá un adecuado adhesivo en función de la superficie de colocación y el tipo de baldosa cerámica.

Es muy importante que en la colocación de la baldosa cerámica se utilicen las herramientas y útiles adecuados (llana dentada, maza de goma blanca, nivel de burbuja y ventosa). También debemos considerar importante que el soporte o base de colocación debe estar muy limpio de cualquier mancha resto de yeso, pintura etc. de forma que la adherencia podrá realizar sus funciones a lo largo del tiempo.

Deben considerar siempre las indicaciones del fabricante de adhesivos.
